

MISSION[®]

HERBICIDE

From pre-emergence to post-emergence, American farmers are now in control.

MISSION[®] herbicide: For safe, extended control in almonds, grapes, citrus, conifers and tree nuts*.

MISSION is different—providing powerful pre-emergence and post-emergence control of broadleaf weeds and grasses. Since the active ingredient, flazasulfuron, is absorbed through the root and foliage of plants, MISSION acts quickly and safely, offering:

- Early post-emergence control of difficult weed species
- Long-lasting residual control with a low application rate of 2.14 to 2.85/oz. per acre**
- Flexible application timing (fall, winter and spring)
- Compatibility with many burndown products
- Solid resistance management option

MISSION is now available to U.S. growers, through Helena Chemical Company and Tenkoz member companies. See label for complete details and application instructions.

**Is MISSION right for your operation?
Contact Summit Agro USA at 916.952.0105.**

*Tree nuts include hazelnuts, pistachios, english walnuts, black walnuts and pecans.
**Where a rate range is indicated, use the lower rate for tank mixes or areas with normal weed pressure. Use higher rates when MISSION is applied alone or when treating areas with heavy weed populations.

Always read and follow label directions.
