

# TIMOREX GOLD<sup>®</sup>

A BROAD SPECTRUM  
NATURAL FUNGICIDE

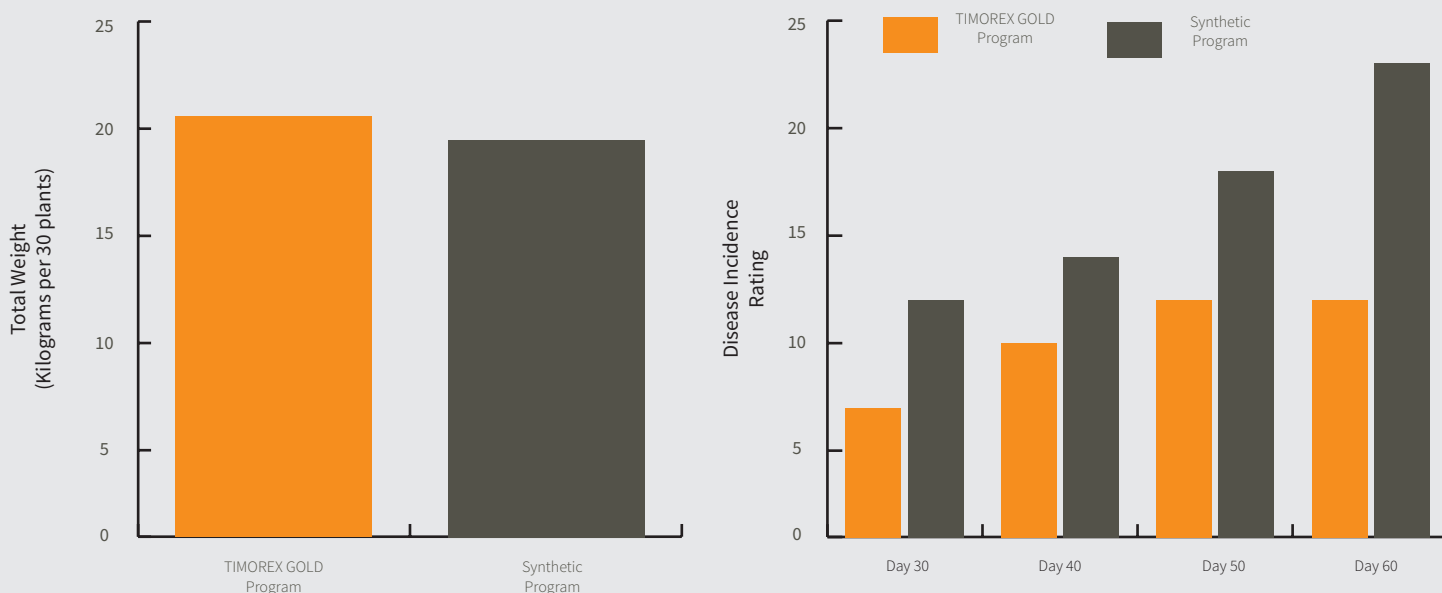

## For Control of Fungal and Bacterial Diseases in Fruiting Vegetables

**TIMOREX GOLD reduces harmful disease while improving overall yield.**

Introducing TIMOREX GOLD<sup>®</sup>, a natural botanical broad-spectrum fungicide and bactericide for control of common bacterial and fungal diseases found in fruiting vegetables, including *Xanthomonas*, *Pseudomonas*, Bacterial Spot and Speck, *Botrytis* (grey mold), Powdery Mildew, and *Alternaria*. When used in rotation with a conventional chemistry, TIMOREX GOLD provides improved disease control and has been scientifically formulated to help keep early season disease pressures low, allowing growers to save synthetic chemistries for control of heavy disease pressure later. TIMOREX GOLD has a unique mode of action that helps prevent resistance development to synthetic products and has been shown to improve plant vigor and yield when used in rotational programs. Based on a plant extract from the tea tree (*Melaleuca alternifolia*) TIMOREX GOLD is not subject to MRL restrictions and has a short PHI making it an excellent late-season choice for disease control.

### Disease Control and Yield Comparable to Conventional Synthetic Programs

#### TIMOREX GOLD vs. Bacterial Spot in Bell Peppers

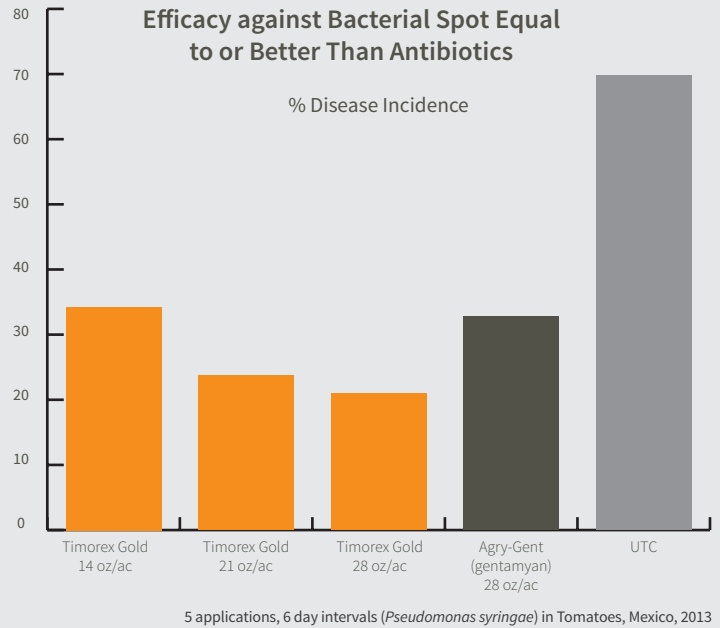

Naples, FL - 2016

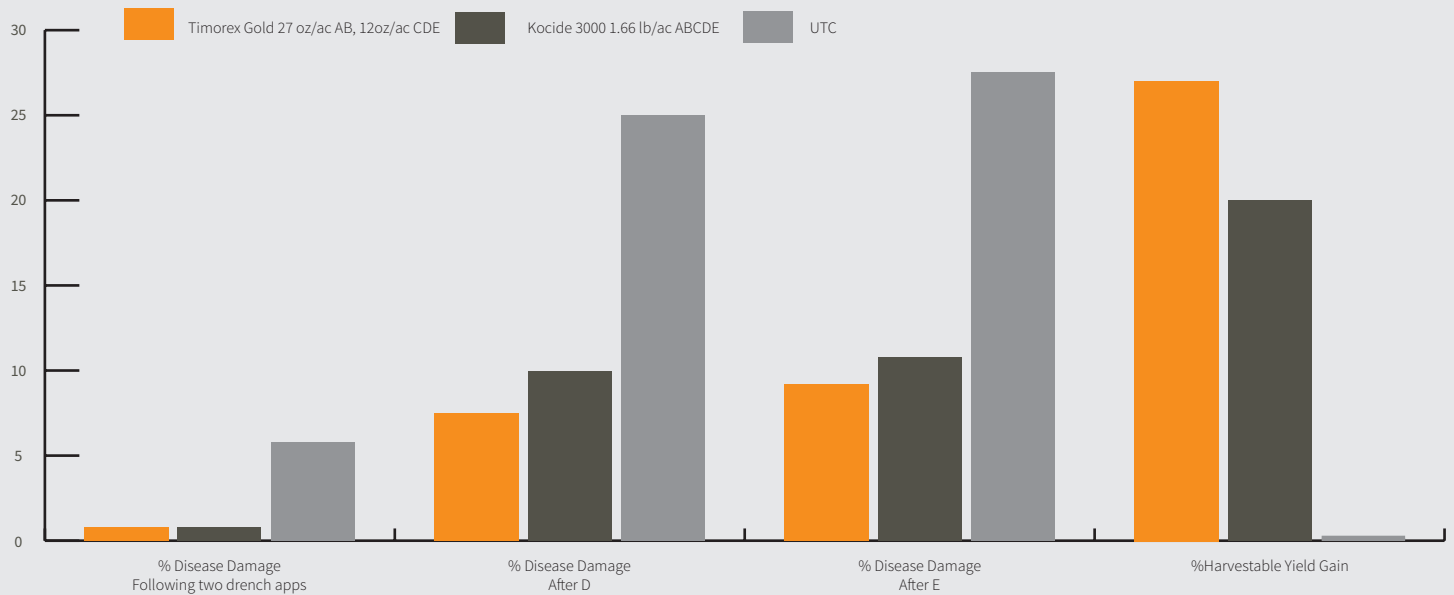

## Use Timorex Gold for Control of Bacterial Diseases in Fruiting Vegetables

In addition to its fungal control on par with synthetic programs, TIMOREX GOLD also provides control of bacterial diseases. It is an excellent alternative to antibiotics and copper in bacterial disease control programs. Easy to use and flexible, TIMOREX GOLD is an ideal choice for complex production models such as organics or no-residue requirements.

Use TIMOREX GOLD in broad-spectrum disease programs as an alternative to conventional contact multi-site products. Easily integrated into multiple stages of a program, TIMOREX GOLD has an excellent fit into a variety of application timings for both fungal and bacterial diseases.

## Season Long Control of Bacterial Spot (*Xanthomonas Gardneri*)

2016 – Almonte, Ontario, Canada CA1601 - A, B: Drench applications in the nursery; C,D,E; Foliar application in the field following transplant. Applications on ~7 day cycle

### Always read and follow label directions.
